# TOWER OF HEADS

## VIDEO DEVICE

Heads tower is a sculpture created with audiovisual devices by means of electronic image. The work comprises five modules that generate a visual forms through a technique which allows exposure of the three-dimensional moving images. Generated videos are displayed as luminous bodies trapped inside the device, forms the viewer scans moving around the work similarly to the examination to be conducted to a three dimensional object.

The work experience with an imaging system similar to holographic forms where shown videos become a proposal closer to the sculptural tradition that audiovisual narrative. It is a system that allows you to mold the video as a physical body, a technological system that investigates the concept of device and its potential to create new visual forms.

2011
